Mark Burhenne's book goes beyond the normal "how to get better sleep" articles that we've all tried

looking up on the web (the ones that give the standard tips, like no blue lights, using lavender, etc). The 8-Hour Sleep Paradox instead focuses on an often overlooked cause of daytime tiredness - the importance of the airway during sleep, which often relaxes and collapses, resulting in restricted airflow and in turn, a negative impact on sleep quality (the book basically points out that if your brain thinks that you're suffocating, it wakes you up, and forces itself to reboot during sleep). Dr. Burhenne is a dentist who focuses on sleep medicine. He addresses the obvious question right off the bat, about why a Dentist is writing a book about sleep disorders, and explains a personal connection to sleep apnea in his own family, as well as the important link between dental and facial development (which has evolved over time with modern society, but has unfortunately led to increased potential for a narrower airway among humans). The book covers the importance of sleep, just what happens during sleep in terms of physical and mental restoration, and how it corresponds to general physical as well as mental and emotional well being, including stress management and your ability to function throughout the day. The main purpose of this book is to introduce you to the idea that you may not be sleeping well at night, and offers examples of people who have received and benefited from sleep study, as well as tips on how to work with insurance companies and doctors in order to get help from a sleep clinic, and the various treatment methods offered through them.

Shall we dispense with the legalities first? I received a complimentary copy of this book in exchange for an honest review. There are many first rate reviews of this book already listed, and I shall try not to duplicate too much of those reviews. When the chance to read and review this book came across my screen, I jumped at it. I've suffered from insomnia since I first became a mother. (Yes, I think there might be a correlation, and though my kids no longer live at home, I truly wonder if insomnia, in this case, became a habit I need to learn to break? Or is there a more sinister, underlying cause?) I quite literally read this book in one sitting; I found it that well written and that informative. As a child (post tonsillectomy) I required 9-10 hours of sleep a night, as an adult, that time dropped to around 8, and I now consider myself lucky to get 7. Do I snore? I don't know. No one has ever complained about it, but I am going to get one of the apps for my phone to find out. And I am going to ask my dentist the questions Dr. Burhenne recommends. In fact, I have ordered a copy of the book to give him well before my next visit so he will have a better idea of why I'm asking the questions. I am also going to talk to my MD about the possibility of a sleep study. If you sleep, I recommend you read this book. If you sleep but don't sleep well, this book could, literally, save your life. If your sleep partner snores, snorts, mumbles, &c, in her/his sleep, this book could save his/her life "and possibly your partnership. One of the first things I noticed is the use of footnotes v. end

notes. Dr. Burhenne gets extra points for that (I hate end notes).
